Week 5

Problem Statement 1. **Concatenate Two Strings**
Write a C program to join two strings into a single string (like strcat()), without using library functions.

```
Enter first string: hello
Enter second string: world
Concatenated string: helloworld
```

Problem Statement 2: Username Validator (Strings)
A website requires usernames to follow certain rules.
Write a C program that:

- Reads a username (string) from the user.
- Finds its **length** (minimum 6 characters, maximum 15).
- Checks whether the username contains only **alphabets and digits** (no spaces or special characters).
- Converts all **uppercase letters to lowercase**.
- Displays whether the username is **valid or invalid**.

```
Enter a username: govind@gmail.com
Processed username: govind@gmail.com
Username is invalid.
```

```
Enter a username: Govind007
Processed username: govind007
Username is valid.
```

```
Enter a username: govindisaProfessorofpractice
Processed username: govindisaprofessorofpractice
Username is invalid.
```
